

SAP License management made easy

The 3rd generation of Dynamic License Control, DLC for short, takes into account the new and future developments at SAP, ensures transparency, and is a powerful aid in the optimization and measurement of your measurement of your SAP licenses, platform-independent. Even before the migration, you can analyze the new world with the help of the DLC, so that you do not run the risk of incorrect licensing and thus incompliant, and to avoid unplanned costs and hassle. This is also the case later in S/4HANA operation (continuous monitoring and notification), as usage, roles, and contracts can change over time.

Why DLC-Software Asset Management?

- License compliance: Know more than SAP
- Prevent expensive overlicensing
- Transparent comparison of licensing usage vs. authorization
- High level of automation and sensible utilization of valuable resources

Measurement acc. usage - ECC

- Measurement only evaluates the actual use of the SAP software
- "Rightsizing" of the licenses according to usage
- Identification of inactive, duplicate or logged-out users
- High degree of automation
- Many reports are available

VS

Measurement based on authorization - S/4

- Measurement evaluates the possible use of the SAP software
- Changing the license assignment according to the authorizations
- Role analysis according to STAR Service
- Profile analysis beyond this (completion of the STAR set of rules and user consolidation)
- Determination of the most cost-effective license type thanks to recommended action in relation to your role concept

Dynamic License Control

Advantages Dynamic License Control:

- **Seamless connection:** Integration with any data source
- **Time saving:** Rule-based summarization and dynamic evaluations
- **Customized, C-level ready dashboards:** Connectivity to Power BI, QlikView and Tableau
- **Continuous monitoring and notifications**
- **Avoidance of unnecessary costs**
